Industry Awards: Best Supplier Solution

TableView Web, Light & Wonder

TableView Web, part of Light & Wonder's suite of Systems solutions, provides an innovative table management solution designed to replace your existing manual rating process. With the ease, speed, and simplicity of a fixed tablet or a mobile device, floor operations staff enter real-time player ratings and issue customer comps and markers right at the table.

Information and transactions recorded at the table integrate seamlessly with the Light & Wonder CMS, providing casino personnel with secure and instant access to table ratings and detailed financial information.

Coupling with the new dashboard, including new game mix, headcounts, rating information and win/loss data, the options are endless for your table management process.

TV Web also has licensed integrations pre-built with major smart table technology providers such as WDTS and ANGEL.
