

# NOVO UNITY™ PRO

## NOVOMATIC's unique combination

NOVO UNITY™ PRO adds extra dimensions of functionality, flexibility and future-proofing to every casino floor. The server-based system provides operators with a unique tool to create a special entertainment world for their casino's specific requirements: choosing the best from server-based electronic table games and slot gaming solutions.

## Features with added value

# Highlights

NOVO UNITY™ PRO offers numerous advantages through its innovative server architecture and seamless integration with the comprehensive NOVO LINE™ system:

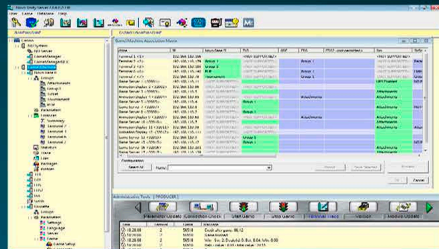

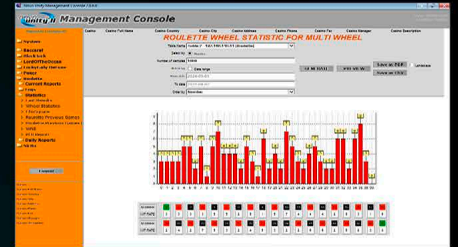

### 1. Customization:

- We support multiple **languages** in both text and speech to cover the international market.
- **Denominations per table:** Each ETG can run up to six tables in any game mode (live, automatic, flying). Each table can be configured with different denominations. This allows one credit to have varying currency values across different tables.
- **Selectable tip option:** Participants at any live table can tip the dealer. A ticket printer and SAS online connection on the terminal are required.
- **Game backgrounds:** All games allow the replacement of game backgrounds with customer-provided graphics, such as a casino logo.
- **Zero credit actions:** When a machine has zero credits, customers can choose from multiple configurations to make the game or table more attractive to players.
- And much more!

## 2. Management Console:

The management console provides real-time and daily data for your entire NOVO UNITY™ PRO gaming set-up. A web-based report engine offers an overview of finances, results, statistics and the performance of your ETG. The management console can be accessed from the manager's desk (web user) or by any authorised technician.

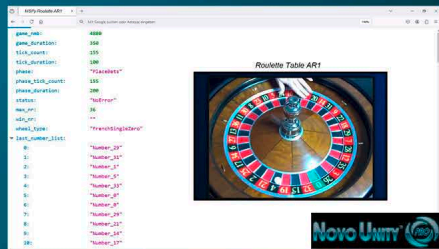

## 3. NOVO UNITY™ DB Server:

The NOVO UNITY™ DB server includes an advanced feature that allows automated game configuration. For example, you can set higher table limits on weekends or automatically adjust game configurations for local events.

Run the **NOVO UNITY'S Player Bets Database** to analyse and monitor players' betting strategies on your ETG system. Data can be stored externally for as long as needed, with backups transferred to **FTP/sFTP** servers. Reports can be generated from these backups.

## 4. Tournament Mode:

Set any NOVO UNITY™ PRO terminal to Tournament Mode, where currency/credits are converted to points. The casino can manage a tournament (player vs player) using any installed ETG and/or NOVO LINE™ Interactive slot games.

## 5. MSPy Service:

**MSPy Service** provides winning numbers, game phases and hot and cold numbers from live game tables to any online platform. Greentube has already developed a mobile version of NOVO UNITY™ PRO Roulette using the MSPy API.

## 6. Simultaneous betting / Parallel Play:

Bet on up to three tables of different games at the same time with the Simultaneous betting option. Parallel play allows players to bet on up three tables simultaneously.

## 7. Wide Area Network / Live Streaming:

Share ETG tables of any game across multiple locations and provide high-quality live video streams of the respective tables. The Casino Bridge feature manages and monitors your WAN connection.

## 8. Multicontent:

Multiple flying or automatic tables from any game can be combined on a single hardware platform. This feature can also be used for animation or game result displays. Up to four tables can be displayed simultaneously, and with a dual-monitor set-up, this number doubles to eight.
